PROFILE

Software Engineer with 4+ years of experience building production-ready web applications using React, TypeScript, and modern frontend technologies, with backend experience in Node.js, Express, and MongoDB. Proven track record of delivering high-performance user interfaces, optimizing application performance, and contributing to scalable product development across cross-functional teams. Strong foundation in component architecture, API integration, and translating complex design systems into clean, maintainable code.

EMPLOYMENT HISTORY

Jun 2026 – Present	Senior Software Engineer , FeenX 🔗 Remote • Own frontend development across web and mobile applications, building production features with React, React Native, and TypeScript while designing and maintaining reusable components and workflows that contribute to scalable frontend architecture across platforms. • Participate in product planning and technical decision-making, helping shape feature requirements, user workflows, and technical direction while collaborating across the stack to deliver end-to-end product features and API integrations. • Build and integrate product features using GraphQL and Relay, handling data fetching, mutations, and frontend-backend communication, while contributing to backend development when needed. • Follow test-driven development workflows to build reliable, maintainable features; develop automated mobile testing with Maestro test suites and handle API quality assurance using Bruno to validate API behavior and frontend-backend integration. • Mentor junior developers through regular code and pull request reviews, providing technical feedback and helping uphold code quality standards.	Cincinnati, Ohio, USA
Mar 2025 – Jan 2026	Frontend Engineer , Techinnover 🔗 Remote • Worked across five production web products, owning frontend architecture for the Lohli PWA from beta and launch through early growth to 1,000+ active users, while contributing to its advertiser platform and admin portal, as well as Filmhouse's web and admin products. • Built and evolved the Lohli PWA with Next.js and TypeScript, implementing authentication, state management, API integration, geolocation-based ad targeting with automatic location updates, and complex user and transaction flows. • Maintained and refactored existing React applications across advertiser and admin platforms, improving analytics and operational workflows; redesigned the Lohli admin platform to give support teams direct control over accounts, funding, bans, transactions, and other operational functions, eliminating the need for developer intervention in those support workflows. • Supported Filmhouse's web and admin products by implementing a movie-concession upsell experience and corresponding administrative controls for manual and automatic configuration. • Collaborated with backend, QA, stakeholders, and cross-functional teams to address concurrency and reliability challenges as Lohli usage grew, while contributing technical input to product roadmaps and business decisions.	
Mar 2023 – Apr 2024	Frontend Engineer , Vinhood 🔗 Remote • Delivered 20+ production features using React.js for a product rollout adopted across 5+ countries, integrating frontend components with backend APIs and reducing load times on key pages by 35% across devices and browsers.	Milan, Italy

- Designed and maintained scalable component structures using Storybook to develop, document, and optimize reusable UI components, while following test-driven development workflows and frontend engineering best practices to improve reliability and maintainability.
- Collaborated with designers and developers to establish a new design system and redesign core product experiences, reducing UI inconsistencies by 30%, while participating in code reviews and cross-functional development processes to improve code quality and reduce production issues.

Oct 2022 – Dec 2022

Frontend Engineer, Hotels.ng [🔗](#)

Remote

- Engineered 10+ production features for Catchup, a live event-scheduling web application, using React.js and converting complex designs into high-performance components with 95% design-to-implementation accuracy.
- Diagnosed and resolved 30+ critical frontend issues, improving application stability, core page-load performance, and end-to-end user experience while collaborating across a 16+ member cross-functional team—including developers, designers, project managers, and backend engineers—to streamline delivery and maintain codebase integrity through Git workflows.

SELECTED PROJECTS

OrbitDesk [🔗](#), Time-Zone-Aware Project Management PWA

- Built a production-style project management PWA using React, TypeScript, Supabase, and Tailwind CSS, supporting task management, team collaboration, and time-zone-aware scheduling.
- Implemented real-time synchronization, authentication, role-based access control, offline support, and background synchronization using Service Workers and Supabase Edge Functions.
- Designed the application around a responsive, mobile-first experience with a focus on reliability across changing network conditions.

ThreadX [🔗](#), Full-Stack Real-Time Messaging Platform

- Built a full-stack real-time messaging platform using React, TypeScript, Node.js, Express, MongoDB, and Socket.io [🔗](#).
- Implemented real-time messaging, authentication, protected routes, online presence, message state management, and secure API communication.
- Deployed the application across Vercel and Render with MongoDB Atlas, integrating frontend and backend services into a complete production-style system.

SKILLS

Languages & Frameworks: HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Next.js, Vue.js, React Native.

Styling & Animation: Sass, Tailwind CSS, Material UI, Styled Components, ShadCN, GSAP, Framer Motion.

State & Data: Zustand, TanStack Query, Redux, Context API, GraphQL, Relay

Backend & APIs: Node.js, Express.js, MongoDB, Firebase, Supabase

Cloud & Deployment: Vercel, Google Cloud Platform (GCP), Render

Tools & Testing: Git, GitHub, Jest, React Testing Library, Storybook, Bruno, Maestro, Figma

EDUCATION

Sep 2018 – Dec 2023

BSc. Computer Science & Engineering, Obafemi Awolowo University [🔗](#)

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Systems, Computer Architecture, Software Engineering.

Activities: Google Developer Student Club (GDSC)
