

Peace Jinadu-Paul, Software Engineer (Frontend)

pjinadu02@gmail.com

LINKS	Portfolio , GitHub , LinkedIn	
PROFILE	Software Engineer with 4+ years of experience building production-ready web applications using React, TypeScript, and modern frontend technologies, with backend experience in Node.js, Express, and MongoDB. Proven track record of delivering high-performance user interfaces, optimizing application performance, and contributing to scalable product development across cross-functional teams. Strong foundation in component architecture, API integration, and translating complex design systems into clean, maintainable code.	
EMPLOYMENT HISTORY		
Mar 2026 — Present	AI Model Evaluation Contractor	
	Remote	
	• Authored and executed adversarial prompts to identify and document AI model vulnerabilities, edge cases, and safety boundaries. • Analyzed and evaluated model-generated code for correctness, efficiency, and adherence to security best practices. • Provided structured feedback and detailed reports to guide model fine-tuning and iterative development for large language models.	
Mar 2025 — Jan 2026	Frontend Engineer, Techinnover	
	Remote	
	• Engineered a large-scale Progressive Web App (PWA) after native App Store rejection, delivering 20+ screens for cross-platform accessibility and seamless updates. • Developed 15+ complex user flows, including dual-layer verification and secure transaction systems with BVN verification, reducing fraud risk for user-to-user transfers and withdrawals. • Implemented platform-specific features, including iOS installation prompts that increased PWA adoption by 40% among iPhone users. • Integrated and consumed RESTful APIs for geolocation services, authentication, and ad personalization, collaborating with backend engineers to define data contracts and ensure seamless frontend-backend communication. • Architected a social ecosystem with tribes, content interaction, and a rewards system (“shekels”), creating monetization pathways between advertisers and users. • Maintained legacy codebases and collaborated with cross-functional teams and stakeholders, contributing technical input to product roadmaps and business decisions.	
Mar 2023 — Apr 2024	Frontend Engineer, Vinhood	Milan, Italy
	Remote	
	• Delivered 20+ production features using React.js, supporting the V2 rollout adopted across 5+ countries and achieving 98% responsive design compliance. • Built and optimized reusable components and integrated them with backend APIs, reducing load times on key pages by 35% across devices and browsers • Collaborated with developers and UI/UX designers to create a new design system and redesign the product, enabling a successful V2 launch. • Reduced design inconsistencies by 30% through systematic UI standardization and close design-engineering collaboration. • Participated in code reviews and upheld frontend best practices, contributing to improved code quality and fewer production issues.	
Feb 2021 — Present	Independent Software Engineer	
	Remote	
	Project: OrbitDesk (Time-Zone-Aware Project Management PWA)	
	• Engineered a full-stack command center for global professionals using React, TypeScript, and Supabase, unifying project management with real-time financial tracking and currency conversion. • Developed a high-performance dashboard with real-time data synchronization and implemented an automated background push notification system using Service Workers and Supabase Edge Functions to alert users of deadlines.	

- Delivered a polished, mobile-first PWA with a native-app feel, achieving seamless state management and a high-fidelity user experience.

Project: Memoir Notes (Full-Stack Note-Taking Application)

- Designed and built a full-stack application using Node.js, Express, and MongoDB, with secure CRUD operations and JWT-based authentication with refresh token rotation.
- Architected RESTful APIs with modular controllers and middleware; integrated the frontend using React Query and Axios for efficient data fetching, caching, and state synchronization.
- Deployed and maintained the application in production using Vercel and Railway.

Oct 2022 — Dec 2022

Frontend Engineer, Hotels.ng

Remote

- Translated designs and wireframes into 10+ production features using React.js, achieving 95% design-to-implementation accuracy.
- Debugged and resolved 30+ frontend issues, improving application stability, page load performance, and overall user experience.
- Collaborated with a cross-functional team of 8 developers, 3 project managers, 5 designers, and backend engineers to build and deploy “Catchup,” a live event-scheduling web application.
- Used Git-based version control to manage merges, maintain codebase integrity, and support efficient team collaboration.

SKILLS

Languages & Frameworks: HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Next.js, Vue.js, React Native.

Styling & Animation: Sass, Tailwind CSS, Material UI, Styled Components, ShadCN, GSAP, Framer Motion.

State & Data: Redux, Zustand, Context API, Pinia, React Query.

Backend & APIs: Node.js, Express.js, MongoDB, Firebase, Supabase

Cloud & Deployment: Vercel, Google Cloud Platform (GCP)

Tools & Testing: Git, GitHub, Jest, React Testing Library, Storybook, Figma.

EDUCATION

Sept 2018 — Dec 2023

BSc. Computer Science & Engineering, Obafemi Awolowo University

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Systems, Computer Architecture, Software Engineering.

Activities: Google Developer Student Club (GDSC).
